

In Class Assignment Week 9

First Fit

185k, 100k, 150k, 200k, 17k, 125k (in order)

Empty Queue

- 115k to hole 300k
- 500k to 600k
- 358k to 750k
- 200k to 350k
- 375k to 392k

Best Fit

Holes: 300k, 100k, 350k, 0k, 17k, 10k (in order)

Queue:

- 115k to 125k
- 500k to 600k
- 358k to 750k
- 200k to 200k
- 375k to 392k

Worst Fit

Holes: 300k, 242k, 150k, 200k, 135k, 125k (in order)

Queue: 375k (in order)

- 115k to 750k
- 500k to 635k
- 358k to 600k
- 200k to 350k
- 375k to none since none of the holes can fit it :(

Ranking

1. Best Fit
2. First fit
3. Worst fit

Best fit has a variety of sized holes from a small amount like 10k to 300k so we can use our holes efficiently depending on what's needed. Plus having a 0k hole means it's at full usage

which is good since it's not sitting idle, it's being used. Additionally, first fit, and best fit both could allocate space to all of the items in the queue. Whereas worst fit couldn't so it's ranked last.
